Ordered by Paymill (<https://www.paymill.com/>)

Support / Download: <http://wordpress.org/plugins/paymill/>

Installation manual

General Settings

Installation of Paymill Plugin in WordPress is quite easy and could be done without reading this manual. If there are any installation issues or problems while using the plugin, the following manual should clear out some questions.

1. Unzip the plugin archive.
2. Upload the directory „paymill“ to the plugin directory of WordPress.
3. Activate the plugin „Paymill“ in WordPress Adminpanel on „Plugins“ tab.
4. Submit personal API keys and API endpoint address.
5. You can setup here which Payment Options are presented in payment form. Because of Paymill security guidelines, it's not possible to automatically retrieve these informations. Please take care to only check those methods which are available in your Paymill account.

WooCommerce

1. Activate Paymill Payment WooCommerce -> Settings -> Payment Gateways -> Paymill

That's all. The payment gateway is now available in WooCommerce and ready to use. Subscriptions are supported within WooCXcommerce, requires official WooCommerce "Subscriptions"-Addon.

Pay Button

The Pay Button is a simple, independent feature which allows product sales without overloading features. Please note that we can not compete with full eCommerce Solutions. You may extend the Pay Button with own custom features. Additionally, you may consider hiring the plugin author if there is a demand for a customization.

1. You may start with the common settings in WordPress ACP -> Paymill -> Pay Button. You can toggle the settings with a click on „Toggle View“.
2. You can setup unlimited products. Please note that only those products will be listed in widget which have a title set. The products list starts with 5 slots and extends after you've set and saved the last product title in that list. Pay Button supports subscription feature in Paymill. Subscriptions must be set in Paymill-Dashboard to make them available within Product Settings of Pay Button.
3. To allow different shipping pricings, you are able to add unlimited shipping destinations.
4. Activate the widget by moving it to your sidebar. Please note that you'll not be able to load more than one Paymill form on the same page.
5. You may customize the widget via CSS. All HTML elements have appropriate CSS classes and IDs.

Shopplugin

1. Copy the directory “shopp-addons” from Paymill/copy_this/shopp/wp-content/ via FTP into “wp-content” of WordPress. Paymill will appear as payment gateway within shopplugin admin control panel.

Magic Members

1. Copy the directory “magicmembers” from /copy_this/ in paymill plugin-directory via FTP into “wp-content/plugins” of WordPress. Paymill will appear as payment gateway within Magic Members admin control panel.
2. Currently, user account subscriptions and post purchases are supported.

Cart66

1. Open file /wp-content/plugins/cart66-lite/views/checkout.php and in line 14, replace

`'Cart662Checkout'`

with

`'Cart662Checkout',`

`'Cart66_paymill_for_wordpress'`

Unfortunately, you'll need to repeat this step on each update of Cart66.

2. Insert Shortcode [cart66_paymill_for_wordpress] into your checkout page.

Troubleshooting

If not done yet, the TEST API Keys should be replaced with LIVE API Keys within Paymill admin panel of WordPress.

If you get an error while paying with specific payment methods, please make sure this method is available in your Paymill-Account.

Subscriptions are currently supported for: WooCommerce, Pay Button

Translation

The plugins uses translation feature of WordPress. The language files can be found at `paymill/lib/translate/`
