

Paymill WordPress Plugin

Last updated for plugin version 1.1

Plugin-License: GPL, attached (license.txt).

Developer: Matthias Reuter (<http://straightvisions.com> / <http://ipbwi.com>), Agency Elbnetz (<http://elbnetz.com>)

Ordered by Paymill (<https://www.paymill.com/>)

Support / Download: soon available on WordPress.org

known bugs / open tasks

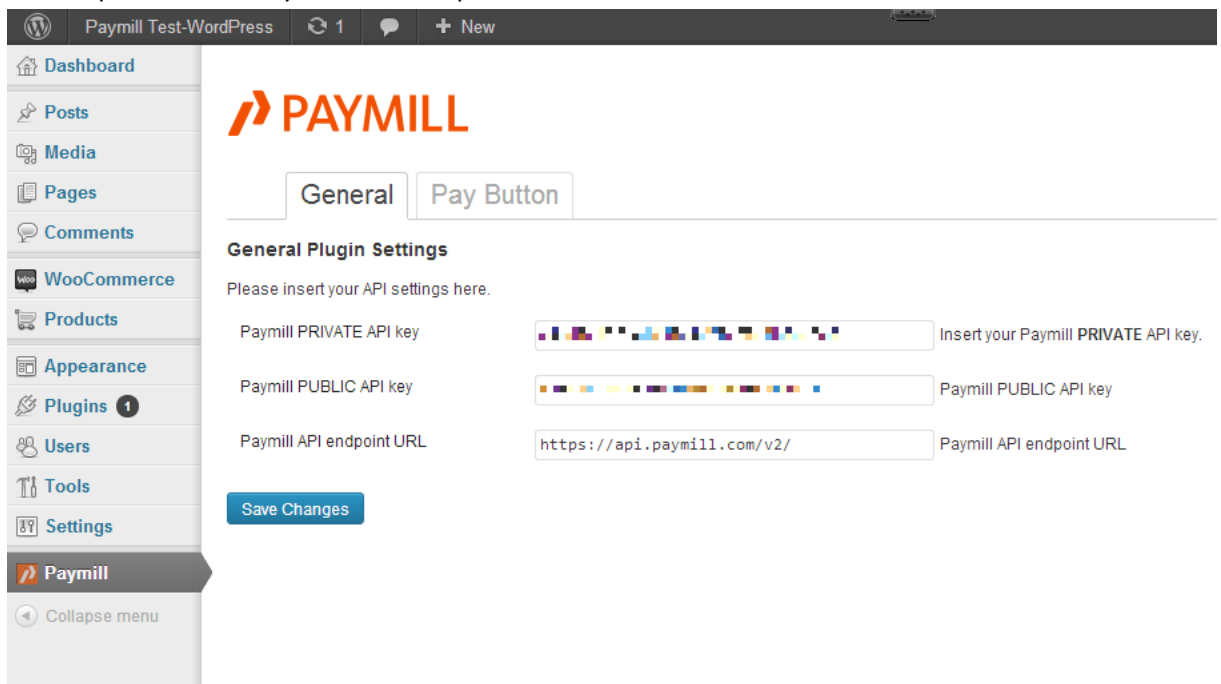

- Payment Gateway for ShopPlugin: <https://shopplugin.net/>
- Payment Gateway for <http://www.magicmembers.com/>
- Shortcode support for Pay Button

Installation manual

General Settings

Installation of Paymill Plugin in WordPress is quite easy and could be done without reading this manual. If there are any installation issues or problems while using the plugin, the following manual should clear out some questions.

1. Unzip the plugin archive.
2. Upload the directory „paymill“ to the plugin directory of WordPress.
3. Activate the plugin „Paymill“ in WordPress Adminpanel on „Plugins“ tab.
4. Submit personal API keys and API endpoint address.

The screenshot shows the WordPress admin dashboard with the Paymill plugin settings page. The left sidebar contains the standard WordPress menu items: Dashboard, Posts, Media, Pages, Comments, WooCommerce, Products, Appearance, Plugins (1), Users, Tools, Settings, and Paymill. The Paymill settings page has two tabs: General and Pay Button. The General tab is active, showing the 'General Plugin Settings' section. It prompts the user to 'Please insert your API settings here.' and includes three input fields: 'Paymill PRIVATE API key', 'Paymill PUBLIC API key', and 'Paymill API endpoint URL'. The 'Paymill API endpoint URL' field is pre-filled with 'https://api.paymill.com/v2/'. A 'Save Changes' button is located at the bottom of the settings form.

Save Changes

WooCommerce

1. Activate Paymill Payment WooCommerce -> Settings -> Payment Gateways -> Paymill

The screenshot shows the WordPress dashboard for 'Paymill Test-WordPress'. The left sidebar contains the standard WordPress menu with 'WooCommerce' expanded, showing 'Orders' (33), 'Reports', 'Coupons', 'Settings', and 'System Status'. The 'WooCommerce' section is highlighted. The main content area shows the 'Payment Gateways' settings for 'Paymill'. The 'Settings' tab is active, showing the 'Enable/Disable' section with 'Enable Paymill Payment' checked. The 'Title' field is set to 'Paymill Payment'. The 'Customer Message' field is empty. A 'Save changes' button is visible at the bottom left of the settings area.

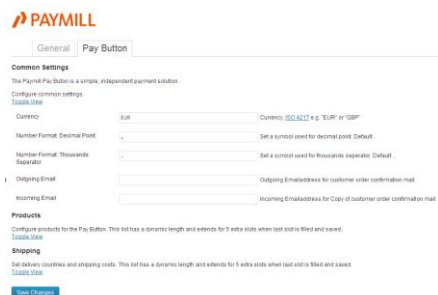

That's all 😊 The payment gateway is now available in WooCommerce and ready to use:

The screenshot shows the Paymill payment gateway checkout form. At the top, there are logos for VISA, V PAY, MasterCard, Maestro, and ELV. The form has a 'Name' field. Below it is a 'Credit Card' button. The 'Credit Card Number' field is followed by the 'CVC' field. The 'Expire Date (MM/YYYY)' field is split into two parts for month and year. At the bottom, there are radio buttons for 'Direct Bank Transfer' and 'PayPal' (with a PayPal logo). A 'Place order' button is at the bottom right.

Pay Button

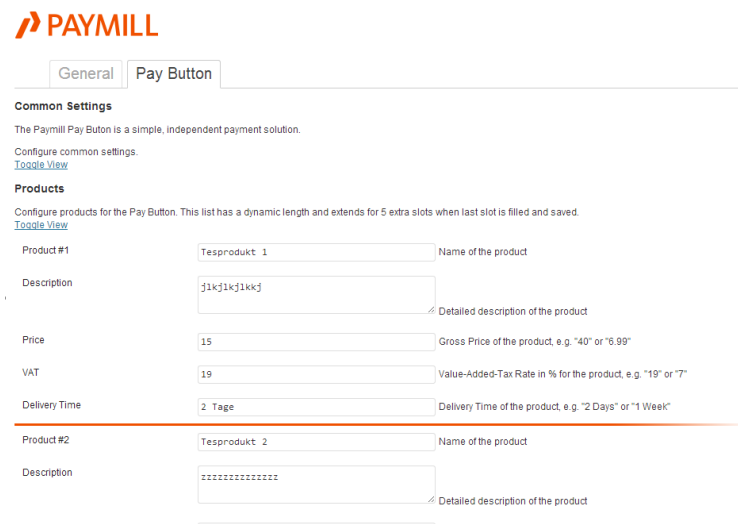

The Pay Button is a simple, independent feature which allows product sales without overloading features. Please note that we can not compete with full eCommerce Solutions. You may extend the Pay Button with own custom features. Additionally, you may consider hiring the plugin author if there is a demand for a customization.

1. You may start with the common settings in WordPress ACP -> Paymill -> Pay Button. You can toggle the settings with a click on „Toggle View“.

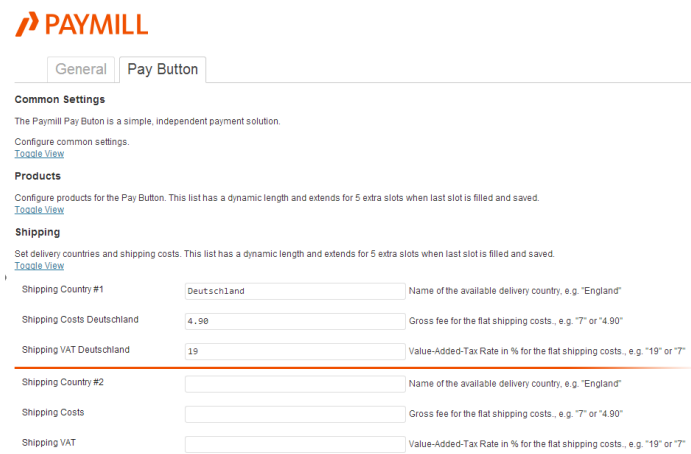

The screenshot shows the 'General' tab of the Paymill Pay Button settings. It includes sections for 'Common Settings' (Currency, Number Format, etc.), 'Products' (a list of products with dynamic length), and 'Shipping' (delivery countries and costs). A 'Toggle View' button is visible at the bottom.

2. You can setup unlimited products. Please note that only those products will be listed in widget which have a title set. The products list starts with 5 slots and extends after you've set and saved the last product title in that list.

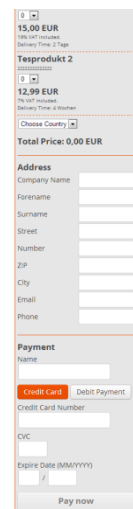

The screenshot shows the 'Products' tab of the Paymill Pay Button settings. It displays a list of products with columns for Product #, Name, Description, Price, VAT, and Delivery Time. Product #1 is 'Tesprodukt 1' with a price of 15 and VAT of 19. Product #2 is 'Tesprodukt 2' with a price of 12.99 and VAT of 19.

3. To allow different shipping pricings, you are able to add unlimited shipping destinations.

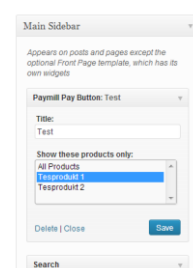

The screenshot shows the 'Shipping' tab of the Paymill Pay Button settings. It displays a list of shipping destinations with columns for Shipping Country, Shipping Costs, and Shipping VAT. Shipping Country #1 is 'Deutschland' with a cost of 4.90 and VAT of 19. Shipping Country #2 is 'England' with a cost of 4.90 and VAT of 19.

4. Activate the widget by moving it to your sidebar. Please note that you'll not be able to load more than one Paymill form on the same page.

The screenshot shows the Paymill Pay Button widget in a sidebar. It displays the total price (0.00 EUR) and a list of products (Tesprodukt 1, Tesprodukt 2). It includes a 'Pay now' button and a 'Search' field.

The screenshot shows the Paymill Pay Button widget in a sidebar, titled 'Paymill Pay Button: Test'. It displays the title 'Test' and a list of products (All Products, Tesprodukt 1, Tesprodukt 2). It includes a 'Delete | Close' button and a 'Save' button.

5. You may customize the widget via CSS. All HTML elements have appropriate CSS classes and IDs.

Troubleshooting

If not done yet, the TEST API Keys should be replaced with LIVE API Keys within Paymill admin panel of WordPress.

Translation

The plugins uses translation feature of WordPress. The language files can be found at `paymill/lib/translate/`
